HENNGE K.K. Engineering Talent Acquisition Team

Shibuya-ku, Tokyo, Japan

Dear HENNGE Recruitment Team,

This is my third time applying to HENNGE's Global Internship Program, and I want to be upfront about that. I keep coming back because I genuinely want to be here not just in Japan, but at HENNGE specifically. The culture of always challenging, the international engineering team, and the seriousness with which you approach cloud security are things I have not found elsewhere. Each application has made me a stronger engineer, and I believe this one reflects that.

I particularly love Mission 3 always. Implementing a TOTP client from scratch reading RFC 6238 and its errata, switching from the default HMAC-SHA-1 to HMAC-SHA-512, deriving the shared secret correctly, and wiring it all into an HTTP Basic Auth POST was genuinely interesting. The RFC reading will always be the hardest part, technical specifications reward patience and precision in a way that I find satisfying once it clicks. Getting that 200 back felt earned.

Over the past 1.5 years at Hashira Works, I built production backend services for Garden Finance in Go and Rust, watcher services, on-chain extraction pipelines, and cross-chain integrations that are still running in production. I also won 3rd place (\$1,000) at the Polkadot Cloud Hackathon, leading backend development for a decentralised document verification platform in Rust and Axum. I am comfortable with Go, Docker, AWS, and Unix environments, and I am finished my B.Tech in Computer Science this year.

On a personal note, I have been learning Japanese, and I follow authors like Yuu Kamiya and Reki Kawahara whose work first made me curious about Japan. I am not applying because Japan is an opportunity, I am applying because HENNGE is a place I want to contribute to and grow in. I would be grateful for the chance to show that in person. Please consider this CV.

Warm regards,

Dinavahi Lohith Sai
