Fuze Health Talent Acquisition Team

Remote, United States

Dear Hiring Team,

I am excited to apply for the Graduate Software Engineer position at Fuze Health. I recently completed my B.Tech in Computer Science and have spent the past 1.5 years building production backend systems in Go and Rust. What drew me to Fuze Health is the opportunity to work at the intersection of software engineering, cloud platforms, and real-world healthcare impact. The chance to contribute to products that genuinely help patients is something I find deeply motivating.

At Hashira Works, I built and maintained backend services for Garden Finance in Go and Rust. A core part of that work involved reading application logs, tracing failures across watcher services and order-execution pipelines, and getting to the root cause quickly under production pressure. I also shipped monitoring automation including a Twitter bot for high-value trade alerts and a Strava-to-Discord notification bot, both of which are still running after three design iterations. Those experiences taught me how critical clear observability and solid documentation are when things go wrong.

My technical background includes Go, Rust, Python, TypeScript, PostgreSQL, AWS, Docker, and REST APIs. I enjoy learning new tools quickly and have proven that under pressure. At the Polkadot Cloud Hackathon, I led backend development for TravelID 2.0, a blockchain-based travel identity verification platform built in Rust and Axum, and we won 3rd place and a \$1,000 prize. I also taught Python to first-year engineering students, which strengthened my ability to explain technical problems clearly across different audiences. I would love the opportunity to bring this background to Fuze Health and grow alongside an experienced engineering team.

Thank you for your time and consideration.

Warm regards,

Dinavahi Lohith Sai
