SUMMARY

I've been writing production code for about 1.5 years, mostly Go and Rust, mostly backend and blockchain. I got into systems work because I actually enjoy it, not just because it looks good on paper. I can handle the whole stack when needed but I'm most at home close to the metal. Still finishing my B.Tech, and honestly just looking for a team with interesting problems where I can keep getting better.

TECHNICAL SKILLS

Languages	Go, Rust, TypeScript, JavaScript, Python
Backend	Node.js, Express.js, Axum, RESTful APIs, WebSockets, Socket.io
Blockchain	Polkadot / Substrate, Subxt, EVM, StarkNet, Solana, ERC-20
Frontend / Mobile	React.js, React Native, Tailwind CSS, shadcn/ui, HTML5, CSS3
Databases	PostgreSQL, MongoDB, MySQL, SQLx
Infrastructure	Docker, AWS, Git, Gitea, Swagger
Tools	Neovim, Figma, Android Studio, macOS

EXPERIENCE

Software Associate (Rust & Go)

Hashira Works · hashira.io | Dec 2024 – Present

- Working on backend services for Garden.Finance, a live blockchain trading product. Mostly Go and Rust day to day.
- Built a Twitter bot that watches for orders over \$10K and fires instant alerts. Also put together a Strava-to-Discord bot and a TypeScript arbitrage bot on the side.
- Wired up WebSockets in the Go-based Watcher service. Before that, real-time data was flaky. After, it wasn't.
- Dug into StarkNet UDA in Rust, dealing with smart contract calls and pulling data off-chain.
- Write the deployment scripts and most of the internal tooling. Everything lives on a self-hosted Gitea instance.

Backend Developer Intern

Navodita Infotech | Feb 2024 – Mar 2024

- Built a multi-room chat app from scratch with Node.js, Express, and Socket.io. Got a Letter of Recommendation for it.

Python Instructor (Part-time)

NRI Institute of Technology | May 2024 – Aug 2024

- Taught Python to beginners. We covered file handling, text analysis, a Rock-Paper-Scissors game. Kept it practical.

PROJECTS

Full portfolio at lohit.xyz · source at github.com/lohit-dev

TravelID 2.0 3rd Prize · \$1,000 · Polkadot Cloud Hackathon

Rust, Axum, Subxt, React, TypeScript, PostgreSQL, Polkadot, shadcn/ui

- A platform for verifying travel documents on-chain via Polkadot. The document gets hashed, the hash goes on-chain, done.
- I wrote all of the Rust backend (Axum, Subxt, SQLx) and helped with the React frontend and wallet integration.
- The point was that you can prove a document is legit without ever showing what's inside it. Won 3rd place and \$1,000.

Anime Streaming Mobile App

React Native, JavaScript, Tailwind CSS, Consumet API

- A mobile app for browsing and streaming anime. Uses the Consumet API to pull from Anitaku.
- This one I actually spent real time on the UI, and I think it shows. Smooth, responsive, looks good on mobile.
- Tuned the data fetching so navigation stays fast even when the connection isn't great.

Real-Time Chat App

Node.js, Express, Socket.io, JavaScript

- Multi-room chat with live message broadcasting. Built this during my internship and it ended up being good groundwork for the Socket.io stuff I do at Hashira.

Telegram APK Release Bot

Python, python-telegram-bot, GitHub API

- A bot that checks my GitHub releases and sends the APK straight to Telegram. Built it for myself so I don't have to manually share builds.
- Small thing but I use it every time I push a new release, so it was worth the hour it took to write.

EDUCATION

B.Tech in Computer Science & Data Science

NRI Institute of Technology (Agiripalli) | 2022 – Present (Final Semester)

- Part of Google Developers Club. Went to hackathons, workshops, the usual.
- Won first place in a college-wide SQL mobile app competition.
- Published two Android apps on the Play Store on my own, start to finish.

Intermediate — MPC (Maths, Physics, Chemistry)

Sri Chaitanya Junior College | 2020 – 2022

SSC

Ravindra Bharathi Public School | 2019 – 2020

LANGUAGES

English

Proficient

Telugu

Native

Japanese

Learning

A BIT ABOUT ME

- On a Mac Pro M5 now. Before that I ran Arch for 6+ months, tried a bunch of other distros along the way, and have no regrets.
- Neovim is my editor. I have opinions about this and I will share them if you ask.
- Big Resident Evil fan. RE2 Remake was the first game I bought with my own money. Everything before that was acquired through other means.
- I track my anime on AniList (anilist.co/user/Kinggrey). Current favourites are Re:Zero, No Game No Life, and Maid-sama.
- Reading Harry Potter for the first time. On book 4. Going slowly because work keeps getting in the way.
- Pretty introverted, a bit of a scaredy-cat, mostly just go with the flow. Works out fine most of the time.
